🔍 RESEARCH

GEORGIA INSTITUTE OF TECHNOLOGY

BISCUIT: A SCHEDULER FRAMEWORK FOR DETECTING AND MITIGATING CACHE-BASED SIDE-CHANNEL ATTACKS

- Created a linear model based on cache misses
- Built a scheduler which compares hardware cache misses to model to detect side-channel attacks and mitigate them

SIBYL: PREDICTING INTERPROCEDURAL PROGRAM PATHS USING DECISION TREES AND SEQUENCE TO SEQUENCE MODEL

- Created the entire path profile using LLVM
- Trained a decision tree classifier using the path profile
- Created a sequence to sequence model based on the call chain to predict the next function
- Inserted the classifiers backed into the program to predict paths as early as possible
- Detect both control data attacks and non-control data attacks by comparing paths with the predicted paths

CARNEGIE MELLON UNIVERSITY

META-CLF2: AUTOMATED VERIFICATION OF CONCURRENT, DISTRIBUTED AND PARALLEL PROPERTIES IN APPLICATIONS

- Formalized Automated Trading Systems (ATS) in Celf, a concurrent logical framework (CLF)
- Proved financial properties about ATS and provided a CLF formalization of the proof

📄 PUBLICATIONS

WORKSHOP PUBLICATIONS

FORMALIZATION OF AUTOMATED TRADING SYSTEMS IN A CONCURRENT LINEAR FRAMEWORK (CLF)

PROJECTS

DYNAMIC DEPENDENCE GRAPH

- Built a LLVM application to create a graph showing both data dependence and control dependence
- Implemented based on approach 1 and 2 from Hiralal Agrawal and Joseph R. Horg's Dynamic Program Slicing paper
- Instrumented each function to check whether it got executed and piped it into the DG tool to create dependence graphs of only executed functions

RAPID RESPONSE

- Built a web application to provide information and place of attacks in rural countries to rescue workers
- Scraped information about attacks from social media and news websites using BeautifulSoup and Twitter's API
- Implemented using AngularJS and Django for frontend and backend respectively

KESA

- Built a web application to allow users to create and read stories with branching storylines
- Maintained the story as a D3 tree structure
- Created story sessions using PeerJS for authors to collaborate on these stories
- Implemented using AngularJS and Django for frontend and backend respectively

CONCURRENT DISTRIBUTED FILE SYSTEM

- Built a system containing multiple storage servers and the main naming server
- Implemented my own Java's Remote Method Invocation (RMI) library to allow communication between servers

SMART TEXT EDITOR

- Built a text editor web application in pure Javascript with basic functionalities
- Implemented a built-in thesaurus and Google Knowledge Base system into the editor to allow people to get information faster without leaving the editor
